*Politiche di gestione di un dominio aziendale problematiche di base, componenti, scelte di implementazione e principali protocolli coinvolti.*

*Storage Area Network SAN e Network Attached Storage NAS.*

*Firme elettroniche e firme digitali funzionamento e normativa.*

*Organi del Comune*

## Testo 1

In the data center world, large capacity Storage Area Networks (SAN) have become the minimum standard. As cloud providers and virtualization also continue to make massive impacts in the technology world, the need for even more SAN storage space has become evident.

Most SAN hardware is comprised of a minimalistic controller (or set of controllers) and a large collection of high capacity drives all configured to support high amounts of data availability and integrity.

Many of these specialized products are made by big name vendors such as Netapp, Dell Equallogic, HP Storageworks, or EMC and have price tags attached to them that only the largest of enterprises can afford.
